U.S. Citizen

Experience

Backend / AI Intern, MSBC Group

Ahmedabad, India | Mar 2026 – Present

- Architected a production-ready multi-tenant RBAC framework packaged for private Nexus distribution and integrated across enterprise Django services.
- Engineered a scalable JSON configuration platform supporting hierarchical inheritance, Redis caching, SHA-256 drift detection, versioning, and administrative tooling for enterprise applications.
- Built backend APIs, AI-powered automation workflows, and LangChain/LangGraph integrations while contributing end-to-end features for an enterprise ERP platform using Django, PostgreSQL, Redis, and Python.

Backend Intern, MSBC Group

Ahmedabad, India | Jun 2025 – Jul 2025

- Developed production-ready REST APIs using FastAPI, SQLAlchemy, PostgreSQL, and Pydantic with emphasis on scalable software architecture and maintainable backend services.
- Built Dockerized asynchronous WebSocket services, automated ETL pipelines using Apache Airflow, and event-driven data workflows for production environments.

System Intern, Viaan Technologies

Ahmedabad, India | Dec 2024 – Jan 2025

- Administered AzureSQL environments and integrated on-premises infrastructure with Microsoft Azure services to improve reliability, monitoring, and cloud connectivity.

Projects

Veritas — AI-Powered News Fact Checker

FastAPI, React, LangChain, Celery, Redis, Ollama, Kubernetes

- Built a full-stack AI-powered application with FastAPI and React featuring asynchronous Celery workflows, REST APIs, Redis caching, and real-time WebSocket communication.
- Integrated locally hosted LLMs for semantic analysis, automated claim verification, source aggregation, and AI-powered decision support through scalable backend services.

RBAC — Role-Based Access Control Package

Django, PostgreSQL, Nexus

- Designed a reusable multi-tenant authorization framework with middleware-driven access control and modular package distribution across multiple Django services.

JSON Config Engine

Django, PostgreSQL, Redis

- Built a scalable configuration platform supporting hierarchical inheritance, Redis-backed caching, configuration versioning, SHA-256 drift detection, and administrative diff tooling.

AI-Controlled Traffic Light Management System

OpenCV, NumPy, YOLOv3

- Developed and trained a computer vision model using YOLOv3 for adaptive traffic signal optimization through real-time vehicle detection and density estimation.

Education

Pandit Deendayal Energy University

May 2026

Bachelor of Technology (B.Tech.), Information & Communication Technology

Relevant Coursework: Algorithms, Data Structures, Operating Systems, Database Systems, Machine Learning, Computer Architecture

Skills

Languages: Python, SQL, C++, JavaScript

Frameworks: FastAPI, Django, React, SQLAlchemy, Pydantic, Apache Airflow

Backend: REST APIs, WebSockets, Async Workflows, Event-Driven Systems, System Design, Software Architecture

Databases: PostgreSQL, Redis, AzureSQL

AI/ML: Machine Learning, LangChain, LangGraph, Ollama, Claude API, MCP, Multi-Agent Systems, Computer Vision, YOLOv3, NLI

Cloud & DevOps: Docker, Kubernetes, AWS, Azure, GitHub Actions, Nexus, CI/CD
